

Circulation Accessories

Flush Deck Grating, Main Drains, Eyeballs & Suction Fittings

Better circulation means a cleaner pool

Waterco's Flush Deck Grating, installed around the edge of the pool, will boost skimming performance so leaves and debris are easily flushed away. When combined with the Floor Inlet, water is circulated back into the pool from the bottom up. The pool water is circulated uniformly, ensuring there are no 'dead spots'.

Flush Deck Grating

- > Modular section – easy fitting especially around curves and bends
- > Moulded pattern surface – non slip surface
- > Flush fitting – no protrusion to pool surround
- > Safe even water flow – maximum surface skimming

Floor Inlet Fitting

- > 40 x 50mm
- > Adjustable
- > Slip fit tail slots for easy access into 40/50mm pipe
- > Suction area of 7500mm²
- > Max flow rate 245 lpm

Adaptable

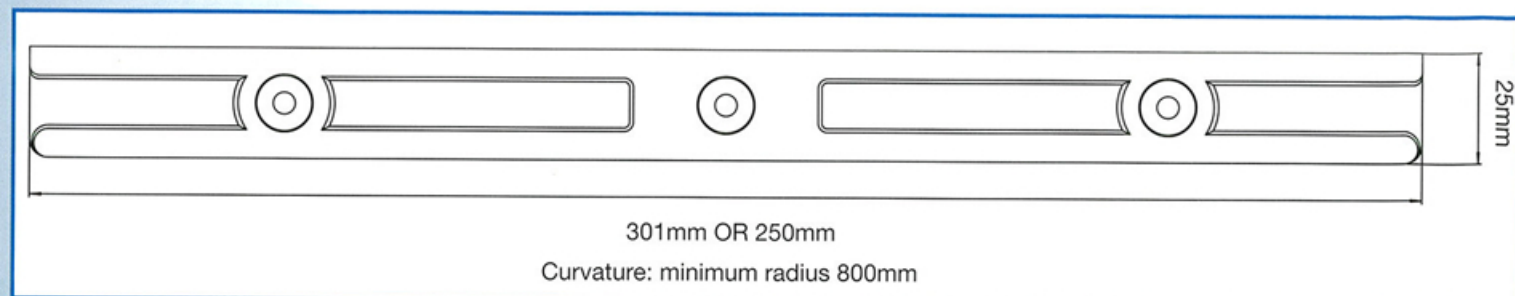

The grates are easy to fit around the curves of free form pools and each section can be removed easily when cleaning the drain trench. The unique wave design on each section of the grating also provides grip to keep the edge of your pool safe for swimmers.

I Section Design

The grate design incorporates an "I" section to maximize strength and durability of the grating. Both the grating and the inlets are made from ABS plastic that is non corrosive, resistant to chemical staining and UV degradation.

Simple Installation

As each section of the grating is a snap fit. The grates can be easily installed on a slope if desired and this will minimise any splash out.

Warranty

The new commercial circulation system accessories are covered by Waterco's comprehensive 12 month warranty.
